HEALTH DATA ANALYST / BIOSTATISTICIAN

The company

HealThink is a pioneering research and consulting firm with international experience in health technology assessment (HTA). Our dynamic team has a proven track record of successfully partnering with pharmaceutical, medical devices and digital health companies, universities and research centres, medical societies and international consortia in research, development and market access projects. At HealThink, we are dedicated to improving care pathways and ensuring that patients and citizens have access to Value-Based Healthcare.

The opportunity

In a fast-evolving environment, understanding our clients' needs and delivering high-quality, customized services are the cornerstones of our strategy. To align with this strategy and expand our capabilities, we are seeking experienced and self-motivated Health Data Analysts / Biostatisticians eager to advance their careers. Join us and be part of our mission to drive the efficient and sustainable introduction of innovation in the healthcare system.

Main Duties and Responsibilities

- Collect, manage, and analyze health data from various sources
- Clinical trials/non-interventional studies: literature review, study design, sample size calculation, data analysis & management plan, reporting, publication of results
- Collaborate with healthcare professionals to design and evaluate clinical studies
- Database set up, data management, data validation checks and query management
- Present data findings to stakeholders in a clear and concise manner
- Support health economic modelling: literature review, data entry, analysis, reporting

Required Skills & Experience

- PhD, or Masters, or Bachelor's Degree in related field (mathematics, biostatistics, data analytics, econometrics)
- Proficiency in statistical software (R, SAS, SPSS, other) and data visualization tools
- Proficiency with Microsoft Office, especially Excel
- Experience with health data sets and clinical trial design
- Strong analytical, problem-solving, and communication skills in Greek and English

Desired Skills & Experience

- Experience with research methods, tools and approaches, such as reference management, abstract/manuscript submission
- Effective written and verbal communication in Greek and English (business meetings, congress presentations)
- Medical terminology
- Experience or knowledge in health economic modelling or econometrics
- Experience in digital health projects, international or national
- Participation in Horizon projects or other international research projects
- Ability to work both independently and in a team environment
- Result-oriented
- Project management skills and experience
- Ability to coach and mentor team members
- Systematic review and meta-analysis
- GRADE analysis

What we offer:

- Professional development
- Friendly and collaborative work environment
- Competitive salary
- Work/life balance
